# Waffle Pod Mesh Rail Steel Reinforcing Mesh Riser

The NEW Waffle Pod Mesh Rail has been designed as replacement for the 25/40 bar chairs which have been around for as long as waffle pods. The MESH RAIL features save time, save labour and save money. The features of our patent pending design are unique and are a leap forward from the old style bar chairs. The MESH RAIL is just what the industry has been waiting for.

**NOW AVAILABLE!** in Victoria, NSW and SA

Features & Benefits

- LIVE HINGE SPEAR

The LIVE HINGE SPEAR is designed to easily penetrate the top of the waffle pod with minimal pressure. The LIVE HINGE closes when pushed into to pod and opens once the pod top is penetrated, locking the MESH RAIL onto the pod. Once the LIVE HINGE is locked in, it will not move, even when steel reinforcing mesh is dragged over the top of it.

- INTERFERENCE FIT LOCKING LUGS

The INTERFERENCE FIT LOCKING LUGS are designed to easily and quickly lock together where longer Mesh Rail might be required. The standard length of our Mesh Rail is 280mm which in the majority of cases only requires 2 Mesh Rails per pod, saving on money and materials. Where a longer Mesh Rail is desired, they can be easily joined to extend the length in increments of 280mm to 560mm to 840mm and beyond.

- MESH SLIDER

The 45 degree MESH SLIDER allows mesh to be dragged over the rails with minimal effort. Once the Mesh Rails are positioned on the pods with the slides all facing in the same direction, the steel mesh can be dragged over the Rails and placed into position without any concern of the mesh fouling or getting caught on the rails, saving time and money.
